abstract Tests were conducted in the laboratory and in the field on the effect of DDT and LHC (control) on fleas. Fleas (95% of active substance) in fleas of large size (e.g., *Ceratophyllus* *gerbilli* *minax* predominated, but there were also winter types of fleas, etc.). Minimal lethal dose of DDT and LHC powders for fleas in containers with surface area of 1.73 m² and 0.37 m². Then large gerbils were dusted with DDT and LHC by a dusting machine.

G-

duster with 6 and 3 g per entrance, the number of fleas at entrances of treated burrows on the 3rd, 10th and 20th day after treatment was $\sim 1/9 - 1/20$ and less by comparison with the control. Results of DDT and BHC applications are about the same. Dusting after destruction of gerbil is most rational. In the Balkhash region, where gerbils were destroyed in the spring of 1954, entrances to gerbil burrows were treated by DDT on a territory of 300 hectares. DDT powder was applied at a rate of 1.5 g to the entrance by dosage spoons. After 9 days it was noted that the number of fleas at the burrow entrances was decreased by 91-93% by comparison with the initial number. The cost of treatment per hectare when the density of colonies was ~ 1.5 per hectare was 2 rubles, 19 kopeks; 20 workers in 6 hours were able to treat 100 hectares. This method is recommended for

"Short Jet Combustion of Fuel Oil in Small Boilers,"
V. V. Murzakov, Moscow Power Eng Inst imeni
Molotov, 9 pp

"Energet Byul'" No 5

An oilfield boiler must (1) burn crude oil or
natural gas (2) be able to use hard water (3)
work on natural draught, since well may not have
electric supply for fan motor. ADP boiler
satisfies (1) and (2) but not (3), therefore it
was modified.

1/49719

USSR/Engineering (Cont'd)

May 48

Gives drawings of boiler (horizontal water tube
type) and combustion tube. After tests, per-
formance was improved by replacing sprayer with
a steam-jacketed model, in which steam escapes
through a small annulus, thus improving fuel
atomization. Modifications gave almost complete
short jet combustion, raising boiler efficiency
from 30-35% to 65-70%.

Full Title: FUNDAMENTALS OF THE THEORY OF EFFICIENT GAS COMBUSTION
IN METALLURGICAL FURNACES

Transliterated Title: Teoreticheskiye osnovy ratsional'nogo
szhiganiya gaza v metallurgicheskikh pechakh

PUBLISHING DATA

Originating Agency: None

Publishing House: State Scientific and Technical Publishing House of
Literature on Ferrous and Nonferrous Metallurgy (Metallurgizdat)

Date: 1953

No. pp.: 136

No. of copies: 3,500

Editorial Staff: None

PURPOSE: The book is intended for combustion engineers, metallurgists,
and specialists in other fields dealing with the problems of ef-
ficiency in gas combustion.

TEXT DATA

Coverage: The introduction to this book contains a brief historical
sketch of the development of the science of combustion. The first
chapter deals with the basic data from physical chemistry. The
author discusses further the kinetics of gas reactions in ferrous
and nonferrous metallurgical furnaces, flame propagation in gas

Title : The Lymphatic System of the Internal Sexual Organs of Dogs
and Rabbits.

Orig Pub : Vestn. AN KazSSR, 1957¹³ No. 5, 93-105

Abstract : The lymphatic system of the uteri and ovaries of 34 dogs
and 66 rabbits was revealed by an internal injection of a
suspension of Indian ink or colloidal silver. Two variants
of the location of the lymphatic vessels were uncovered. At
pregnancy, the lymphatic vessels of the subserous membrane
and abducent lymphatic vessels are enlarged. In dogs, the
quantity of abducent lymphatic vessels is increased; in

During the 1957 outbreak of influenza, there were no very serious cases with lethal outcome seen in pregnant women. The course of the pregnancy was not influenced by intercurrent influenza and nearly all patients delivered at term. When patients are properly hospitalized and treated with antibiotics, no complications will be observed during pregnancy, delivery and the postnatal period. (L, 7, 10)

This is a review of a 279-page book, by Prof Mir-Ali Kashbay, under the title of "Physical Geography of the Azerbaïdshan SSR," published at Baku in 1965. This book is the first comprehensive study of the physical geography of this southern republic and is fully reliable, having been worked on by many expert scientists over a long period of time. The book discusses climate, hydrology, relief, flora and fauna, geomorphology, orography, and mineral resources of the SSR.

(incl. photos), 5 maps (fold.), tables, biblog. p. 293-302; DLC: p. 91-115, Klimat. [Climate]. Translation into English of Section on Climate is issued as U. S. Quartermaster Corps. Research and Development Branch, Environmental Protection Section, Special Report, No. 32, March 1, 1950, with title The Climate of Mongolia. Translated by George S. Mitchell. 22 p. 2 figs., table, 26 refs. DWB—Chapter on "Climate" contains the basic data on climate presented graphically on temperature variations (6 stations) and on precipitation (5 stations), derived from observations during 1937-1943. Schematic map of mean annual precipitation distribution shows four zones. In general the climate is very continental. Sharp climatic differences can be found even inside small regions caused by orographic and hypsometric conditions. Clear sky prevails, especially in the cold season. Low humidity and scarce precipitation with a cold and long winter, with large temperature amplitudes and a rapid change of seasons are characteristic. The center of the global maximum of atmospheric pressure is found in Mongolia. Here is also found the most southern extension of permafrost and the most northern extension of dry desert. Many interesting details of general and seasonal aspects of climate are discussed and characteristics of extreme conditions are cited. Subject Headings: 1. Climate of Mongolian Republic 2. Mongolia. L. Mitchell, George S. (Trans.). N. A. Zelen.

✓ Murzaev, E. M., Tian'shanskaya vysokogornaya fiziko-geograficheskaya stantsiya. [Tien Shan high altitude physico-geographical station.] *Priroda*, Moscow, 42(12):51-59, Dec. 1953. illus. DLC—The author describes the scientific work of the personnel at the Tien-Shan high altitude station situated at 2100 m near the Chon-Kyzylau gorge, the investigation of Karabatsk glacier (14 km long, 150 m thick, moves 12 m/yr) and the meteorological platforms and instrument shelters. Glacier movements are determined by theodolites. Movement of detritus in mountains of Terekoy was also observed. Experiments to speed the melting of snow and ice artificially, by decreasing the albedo with dust, show that this artificial covering increases the discharge of a river by 54%. Microbiological, geochemical and geological investigations are also being carried out. *Subject Headings*: 1. High altitude observatories 2. Glacial investigations 3. Artificial snow melting 4. Card 1/1 Pub. 86 - 33/36

Authors : Murzaev, E. M., Dr. of Geogr. Sc.

Title : The origin of the name "PAMIR"

Periodical : Priroda 2, page 120. Feb 1954

Abstract : Various interpretations are given for the word "PA-IR" designating a large plateau in Central Asia. The etymology of the word "PAMIR" appears to be Afganistan or Chinese meaning the "Foothold of the Sun".

Institution : Acad. of Sc., USSR, Institute of Geography

Authors : Murzaev, E. M.

Title : In search of dinosaurs in Gobi

Periodical : Priroda 43/10, 124-125, Oct 1954

Abstract : The author reviews a book entitled, "In Search of Dinosaurs in Gobi—Travel Notes of a Member of an Expedition", by A. K. Roshdestvenskiy, published by the Academy of Sciences of the USSR, 191 pages, 1954. Although presented in the form of narration of travel events the work is found to contain much information on geology and paleontology.

Title : Over uncharted ways

Periodical : Priroda 44/1, 125--126, Jan 1955

Abstract : A review is made of the book, "Over Uncharted Ways," by E. M. Murzaev, published by the "Molodaya Gvardiya" (Young Guard) Publishing Office in 1954 and containing 391 pages. The book tells about the life and the work of the geographer, the difficulties met with, and interesting encounters in distant, obscure places where people have rarely penetrated. The book is generally rated good.
